IF THIS IS A VISIT AFTER YOU HAVE ALREADY STARTED TREATMENT, take the time to review your diary, if you are keeping one, and make note of any specific thoughts or concerns to share with your doctor. Review your last test results and ask yourself if there is anything that you do not understand. If you are experiencing side effects remember that you do not have to suffer needlessly. In most cases your doctor will be able to help you. Try to think about what information you might need to help you better understand this disease.

Here are some general questions you might want to ask if they apply to you:

- I have been feeling fatigued but my hemoglobin (Hgb) levels are normal. What else could be causing the fatigue?

- I noticed my hemoglobin (Hgb) and hematocrit (HCT) levels are below the normal range. Could this be why I am feeling fatigued?

- I have been experiencing diarrhea. What can I do to ease this situation?

- What can I do to alleviate the nausea I have been feeling when I take my pills?

- Why am I experiencing a tingling sensation in my hands/arms/legs/feet?
